

A SYSTEM AND METHOD FOR FOOD RECOGNITION

✓ KEY INFORMATION

Patent Number: PI 2021004897

Technology Readiness Level: TRL 6-7

Market Readiness Assessment: MR 2

Location: Universiti Malaya, Malaysia

✓ TECHNOLOGY OVERVIEW

MyDietCam is an AI-powered mobile app that helps users track and improve their eating habits by simply taking photos of their meals. Developed with expertise in **Artificial Intelligence, Nutrition, and Behavioural Sciences**, this app recognizes food from images, calculates nutrient content, and compares it with **national dietary guidelines**. It also offers **personalized feedback and behavior change cues** to support users in making healthier choices.

✓ FEATURES AND SPECIFICATIONS

Image-Based Food Recognition: Snap a photo of your meal, and the app identifies the food items

Nutrient Calculation: Automatically computes calorie and nutrient values

Behavioral Change Integration: Provides personalized advice and reminders to encourage better eating habits

Tailored for Malaysian Diets: Recognizes local foods—something Western apps can't do accurately

User-Friendly Interface: Designed for daily use by individuals, researchers, and health program managers

Reduces Recall Bias: Ideal for research and surveys, as it avoids over- or under-reporting common in manual food logs

✓ POTENTIAL APPLICATION

General Public Use: For self-monitoring food intake and improving diet quality

Nutrition Research Tool: Enhances dietary assessment accuracy for researchers

Corporate Wellness Programs: Tracks employee diet trends and promotes workplace health

Healthcare Support: Assists dietitians in patient monitoring and follow-up

Educational Use: For teaching healthy eating habits in schools and communities

✓ UNIQUE VALUE PROPOSITIONS

Built for Malaysians: Recognizes local foods and dietary habits

AI + Health: Combines artificial intelligence with evidence-based nutrition science

No Manual Logging: Snap a photo, get your nutrition analysis instantly

Research-Grade Accuracy: Reduces recall bias in nutrition studies

Behavioral Support: Encourages lasting positive lifestyle changes
